Recommend™ and Engage™

RETAIL SEGMENT

Wellness and Beauty

CHALLENGE

Brazilian perfume and cosmetics manufacturer Jequiti wanted its new eCommerce site to maximize engagement and sales with an optimized experience tailored to shoppers' geographic location and past brand interactions.

RESULTS

Jequiti uses RichRelevance Engage and RichRelevance Recommend to deliver multi-layered personalization.

- ▶ Since launching its first eCommerce site in tandem with RichRelevance, Jequiti's online sales is increasing 40% MoM.
- ▶ Dynamic product assortments and celebrity tie-in content have ensured alignment with offline channels and marketing.
- ▶ Online conversion rates are growing across geographic regions thanks to contextual recommendations from within the location-based product catalog.

“Jequiti wanted to offer affordable high-quality products to new audiences online, and RichRelevance has helped us launch our online presence with an experience that communicates the brand’s signature combination of star power at a value price. Thanks to the personalized experience RichRelevance provides, we’re able to connect shoppers with content and products aligned with our offerings and business model. We’re well positioned for digital growth as we move forward with RichRelevance as a partner.”

- Marcel Albuquerque

Head of e-Commerce at Jequiti

Jequiti is a leading Brazilian brand of perfume and cosmetics with products backed by Brazilian and international celebrities. The combination of star power and value pricing translates into high quality products to a new customer segment – Jequiti's hallmark. In 2017, Jequiti's sales topped R\$415 million and the company set out to double that figure by 2020 through a revitalized sales strategy and the launch of its first eCommerce site.

Celebrity endorsement of Jequiti in every category, such as fragrances, makeup, hair, body, bath, man and kids, goes farther than simply connecting names with products. Stars appear in print, television and billboard advertising and make appearances at promotional events, including meetings with the brand's more than 250,000 direct sales representatives.

Challenge

As Jequiti prepared to launch its first eCommerce initiative in 2017, it sought to approach its customers to the entertainment universe backed-up Silvio Santos Group business, translating the glamour of celebrity backing into a rich online experience tailored to shoppers' individual beauty needs. Complicating this effort was the need to adapt the new website to reflect and match different regional campaigns that runs at the same time, in different cycles, depending on the region, because it should follow the same Direct Sales door-to-door campaigns and catalog according to a site visitor's location.

In addition to this geographic segmentation, Jequiti sought to enrich the online experience by tailoring product assortments and content according to individual preferences and past purchasing history. By maximizing relevance with dynamically personalized content, Jequiti sought to win customers and earn loyalty in Brazil's crowded beauty and fragrance marketplace.

Solution Overview

Jequiti built its eCommerce business around RichRelevance's AI-based personalization platform. The brand turned to RichRelevance Engage to dynamically detect and serve location-dependent content, products, and offers. RichRelevance Recommend then applied dynamic intelligence to present the most relevant items for each individual from within the region's assigned catalog.

How It Works

Prior to implementing RichRelevance, Jequiti embarked on an extensive search for the right technology to launch its eCommerce presence. All-in-one solutions that promised personalization alongside an eCommerce platform didn't offer the breadth and depth of functionality to meet Jequiti's requirements.

Instead, Jequiti opted to select and integrate two best-of-breed solutions – RichRelevance and VTEX, the largest eCommerce provider in South America. VTEX offered the simplicity of a cloud eCommerce implementation along with the extensive commerce functionality Jequiti sought. RichRelevance's industry-leading dynamic personalization provided the flexibility and interaction-specific machine learning to deliver the layers of contextual relevance Jequiti required. Thanks to RichRelevance's open and flexible architecture, integration was swift and straightforward, with a four-month timeline from selection to launch.

When a shopper first visits the Jequiti site, RichRelevance's Engage, Recommend and Personalization AI dynamically personalizes the site experience in real time. Content from the home page hero banner onwards (from celebrity content to product assortments and site navigation) is tailored to the shopper's geographic location, as well as individual history, context and behavior. A shopper in Bahia might be served content and products connected with one star, while Rio de Janeiro consumers might view content showcasing a new product launch for an entirely different line headed by another spokesperson.

With each site interaction, RichRelevance's AI dynamically applies the most relevant decisioning algorithm to deliver the products best suited for the individual shopper's beauty needs, continually learning and optimizing the experience in real time. Replenishment recommendations, complementary items, and new product launches are presented according to the shopper's context within the customer lifecycle, while at the same time adhering to the business rules established for the regional product catalog.

Since launching in late 2017, Jequiti has worked hand in hand with RichRelevance to build a strong startup presence. Thanks to the content-rich, individualized shopping experience Jequiti offers, engagement is consistently high across geographic regions

Online sales have soared, with month-over-month growth since December average order sizes is increasing. The new eCommerce channel now accounts for a good portion of overall sales. And despite the short time frame since launch, Jequiti's site is attracting return traffic and sales, thanks to personalized recommendations for replenishment items and complementary products.
